Goldfish

Sarasa Comet Goldfish

Carassius auratus species

Common Name: Sarasa Comet Goldfish

Scientific Name: *Carassius auratus*

Species Family: Cyprinidae Community Goldfish Class Goldfish

Temperature: 65°F - 78°F (depends on the breed)

Swimming Range: Middle

Adult Length: 12-16 inches

Feeding Habits: Flake food, fresh spinach, zucchini, peas and lettuce. Frozen plankton, vegetable diet, daphnia, beef heart, brine shrimp, glass worms and blood worms. Tablet and Pellet foods also accepted. Live plants will be eaten, so use as a food source.

Compatibility: A peaceful and schooling fish that mixes well with other goldfish. Ideal for a garden pond.

Habitat: China, Moderately decorated with rocks, plastic plants and driftwood. Breeding During the spawning season the male will have tubercles (small white dots, not to be confused with the disease ich) on their head, pectoral fins and gill covers. Thousands of eggs are produced and the parents are voracious egg eaters and must be removed immediately after spawning.

Housing: Goldfish are freshwater fish. They can be kept in either ponds or aquariums. If kept in an aquarium please allow for 1 gallon of water per 1 inch of fish. If kept in a pond make sure your pond is over 3ft. deep to allow for the successful wintering of your
