Ferret

Mustela Putorius Furo

Natural Habitat: Does not exist in the wild

Lifespan: up to 5-8 years

Food: Commercial Ferret Food, Premium Cat or Kitten food

Breeding:

- Sexually mature at 8-12 months
- Average Gestation Period is 42 days
- Wean at 7-9 weeks

** Sea Dwellers sells only fixed & de-scented ferrets. This reduces odors and makes the animals less aggressive. If not fixed, females will remain in heat until death.*

Other notes: Bathe once a week with ferret shampoo, Ears must be regularly cleaned, Can be litter-box trained, Should be caged when not supervised
